

# Project Information

Kelenföld Power plant  
technological connections

**The task:** The connection of the gas turbine unit with the present power plant unit at the BE Rt. Kelenföld Power plant

**The content:** The designing of the connection of the technological parts, getting the necessary permissions, full constructing and commissioning.

<b>Customer:</b>	Budapest Erőmű Rt.
<b>Income:</b>	HUF 130 M
<b>Deadline:</b>	1995.
<b>The scope of supply:</b>	Detailed engineering design, accessories, pipelines with insulation, control system components.
<b>Description:</b>	The technological pipelines and other connections ensure the contact between the gas turbine unit and the present units of the Power plant. The following systems were constructed: 42 bar main steam pipe, 60 bar supply water pipe, cooling water pipe, soft water pipe, communication and fire alarm systems. The connecting pipes and other systems were planted on pipe bridges.
